

## Smart Bulk Tanks

Take bulk tanks digital for realtime performance measurement and compliance monitoring

### What is it ?

The most advanced industrial technology available is put into a small device that connects all bulk tanks into one secure IoT platform. Whatever sensor is used, its data is encrypted and delivered to wherever it is needed in realtime. It is capable to perform direct block-chain transactions and apply machine learning locally.

### Why use it ?

Automate ERP transactions and eliminate time wasted on weighing bridges. **#costout**

Realtime tank turn visibility and inventory optimization across the value chain. **#workingcapital**

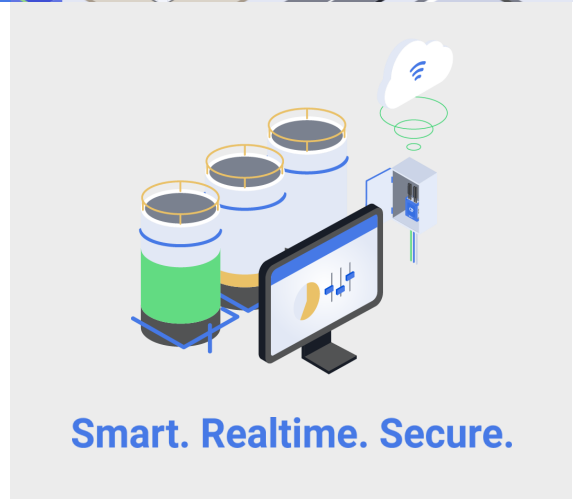

Digital audit trail for outside regulators and automatic batch monitoring. **#compliance**

**“We went from stand-alone tank farms to a central control room within 18 months increasing utilization with 27%”**

- CEO - global chemical company

### How is it different ?

The secure IoT platform is based on an unique architecture which offers the highest security available through end-to-end encryption. It can be scaled rapidly and integrated to business systems to delivery immediate value in daily processes.

Smart. Realtime. Secure.

**3000+**

tanks connected in 18 months

**~30%**

Increased tank turns

**150K+**

fewer ERP user transactions per year
